

FAASTeam presents:

Monthly Hangar Flying Safety Meeting

Investigations of General Aviation Loss of Control Accidents often cite inadequacies in predicting aircraft performance and flight operations conducted outside of established aircraft limitations. The GAJSC feels a substantial reduction in general aviation fatal accidents would result from better prediction of aircraft performance and adherence to aircraft operating limitations.

Points we will touch on: Discuss the importance of aircraft performance calculations. Show pilots how they can assess their individual performance capabilities. Offer suggestions for increased safety in takeoff and landing operations. Encourage pilots to explore pilot and aircraft performance with their CFIs. Provide high level information on where aircraft limitations come from. Encourage operations within established aircraft limitations. Bring your experiences and observations to this interactive discussion. We want to hear from you!

We will also have a presentation by Bill Abbott our area's FAASTeam Program Manager. Bill is going to explain the mission of the FAASTeam and value and advantages of the WINGS program.
